DETAILED ACTION

Claim Rejections - 35 USC § 112

The rejection of Claims 2, 8 and 14 is withdrawn based on Applicant's amendment.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claims recite no feature that places the claimed inventions within the technological arts. No particular technological element such as a computer is claimed. Specifically, the method claims as presented do not claim a technological basis in the pre-amble or body of the claim. Without a claimed technological basis, the claim may be interpreted in an alternative as involving no more than manipulation of an abstract idea and is therefore non-statutory under 35 U.S.C. 101. In contrast, a method claim that includes in the body of the claim at least one structural / functional interrelationship which can only be computer implemented is considered to have a technological basis [See Ex parte Bowman, 61USPQ2d 1660, 1671 (Bd. Pat. App. & Inter. 2001) – used only for content and reasoning since not precedential).

The rejection of Claims 1-21 as rejected under 35 U.S.C. 101 because the claimed invention lacked patentable utility is withdrawn based on Applicant's amendment.

Claim Rejections - 35 USC § 103

Art Unit: 3624

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Jones et al* in view of *Jones et al* in view of *Birwirth et al*, both of record.

As to Claim 1, Jones discloses the invention substantially as claimed as in a method for evaluating financial plans (Abstract) the steps of:

Receiving from a user financial plan information, comprising a predetermined initial value of an investment (Col. 18, lines 27-29), at least one predetermined contribution amount at a predetermined contribution time (Col. 18, line 21 and Col. 18, lines 43-48), at least one predetermined withdrawal amount at a predetermined withdrawal time subsequent to the predetermined contribution time (Col. 22, lines 56-60) and a plan duration (Col. 17, line 36-43 and Col. 18, lines 27-28);

Presenting calculated investment values using results of said steps (Col. 20, lines 7-30).

Jones does not specifically disclose the detail of simulating historical performance of a portfolio to analyze financial plans. Birwirth discloses these particular features as follows:

Selecting a first historical commencement date for a simulation of performance of a financial plan consistent with financial plan information (Page 3, lines 24-26);

Art Unit: 3624

Using historical market data commencing from said first historical commencement date, calculating the changes in said predetermined initial value of an investment for each time period in one or more series of successive historical time periods including allowing for said predetermined contribution amount and said predetermined withdrawal amount continuing until an expiration of the plan duration (Page 3, lines 35-38); and

Selecting a plurality of second historical commencement dates and repeating the foregoing steps of calculation commencing with each of said second historical commencement dates (Page 3, lines 29-32).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the financial plan analysis of *Jones* with the historical analysis of *Birwirth* because of the improved performance resulting from this historical approach. These benefits are specifically set out by *Birwirth* as follows. *Birwirth* describes problems with unrealistic assumptions of traditional financial plans at the last paragraph of page 1 and describes the solution to this problem as using the historical investment experience of others to produce more realistic and useful retirement modeling. See particularly the Conclusion at page 6 of Birwirth.

Additionally, the steps of receiving and allowing for initial investment, contributions, withdrawals and a plan duration cannot confer patentability because the replicate the steps involved in the retirement ledger disclosed by *Birwirth* at page 1, line 16 to page 2, line 51. The concepts recited here are similar to those of another well-known financial activity, balancing a checkbook at the end of the month.

Art Unit: 3624

Regarding Claims 3, 9 and 15, *Bierwirth* discloses the invention substantially as claimed. See the discussions set forth above. *Bierwirth* does not specifically disclose allocation to more than one asset category. Jones et al disclose multiple asset categories and distinct historical data at Fig. 4 and Col. 12, line 54 to Col. 13, line 41. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the multiple asset categories of *Jones* in the invention of *Bierwirth* because this would have allowed investors to flexibly study varying combinations of investments in an attempt to maximize return on investment.

As to Claims 4, 10 and 16, *Bierwirth* disclose comparison of results of calculation to a goal at page 2, lines 31-41.

Concerning Claims 5, 11 and 17, Jones discloses adjustment for taxes at Fig. 3 and Col. 8, lines 1-13. Also, *Bierwirth* discloses adjustment for taxes at pages 5-6, "A Word About Taxes".

With respect to Claims 6, 12 and 18, Jones et al teach the entry of initial investment values and allocation to asset categories at Col. 5, line 50 to Col. Col. 7, line 10.

With respect to Claims 7 and 13, *Bierwirth* discloses the use of a computer system, which inherently uses a storage medium for executable instructions. See *Bierwirth* at page 3, lines 7-9.

Additionally, the steps of receiving initial investment, contributions, withdrawals and a plan duration cannot confer patentability because the replicate the steps involved in the

Art Unit: 3624

retirement ledger disclosed by *Bierwirth* at page 1, line 16 to page 2, line 51. The concepts recited here are similar to those of another well-known financial activity, balancing a checkbook at the end of the month.

As to Claim 19, Bierwirth discloses identification of time intervals at result presentation at page 3, lines 21-33.

Concerning Claim 20, *Bierwirth* discloses having as a goal a specified sum after a number of years at page 2, lines 31-35.

Regarding Claim 21, Jones et al disclose changing an asset allocation after a selected number of time intervals and using a changed allocation in subsequent calculations at Col. 12, lines 24-28.

Response to Arguments

Applicant's arguments with respect to claims 1-21 have been considered but are persuasive.

At page 7 of the response, Applicant argues that *Birwirth* lacks particular features; the Examiner disagrees but additionally relies on *Jones* for these features.

At page 7, last paragraph, Applicant implies that his predetermined withdrawal amounts differ from the steady income amounts of *Birwirth*, but does not state how. There is no claim language which requires that the predetermined withdrawal amounts vary. Thus, *Birwirth* discloses predetermined withdrawal amounts.

Art Unit: 3624

At the second full paragraph of page 8, Applicant asserts a benefit of his invention as being "realistic", a desirable but vague description.

At page 8 onto 9, Applicant asserts flexibility of his plan, allowing for instance, a range of possible ending balances. This is, among other features argued, unclaimed.

At the first full paragraph of page 9, Applicant again argues that by providing for level income, no predetermination is made of withdrawal amounts in *Birwirth*. The Examiner notes that the predetermined withdrawal amount is a predetermined level income in *Birwirth*.

Throughout remarks, Applicant suggests that his invention provides flexibility of considering variables such as saving, retirement age and reducing withdrawals. *Albright et al* is cited but not relied upon for rejection to show that consideration of variables for flexibility was old and well known at the time of invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles R Kyle whose telephone number is (703) 305-4458. The examiner can normally be reached on M-F 6:00-2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent A. Millin can be reached on (703) 308-1065. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-7687.

Art Unit: 3624

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.
